

Cisco Certified Experts: G I A

Network Consulting, Technical Support and IT Outsourcing Services

1-800-704-4193 x1200

Info@Fast.am

Our company is an I.T. outsourcing and consulting firm that distinguishes itself by providing reliable, professional, friendly service and cost-effective, intelligent solutions. We have been providing network services since February 1993. Fast.am

Today's multi-vendor enterprise networks have become so complex and mission-critical that network solutions must cross many disciplines. Our engineers and consultants are experts in next-generation technologies, including VoIP, data, and optical networking, for both private and public networks. The services we provide combine our worldwide expertise, the most current industry trends, and security and quality methodologies. This experience enables us to deliver superior solutions that align the network to meet changing business demands.

We provide end-to-end solutions, covering planning, design, integration, deployment and optimization. With extensive network, systems and applications experience in all major wireline and wireless technologies across hardware and software vendors, our Professional Services are a single source for multivendor, multitechnology network needs. Fast.am

We assume overall responsibility for network hardware and software services, extending our tools and expertise by engaging our best certified network strategists, engineers ([Cisco CCIE](#)), project managers ([PMP](#)). Specialists design, build and operate networking solutions using services from G I A and our numerous strategic partners and alliances. Fast.am

Our proven networking integration skills project management capabilities and industry knowledge enhance control over multi-vendor network infrastructures and business process transformation. G I A offers custom-designed solutions that improve productivity, reduce complexity and strengthen ROI.

Technical Services:

- Interoperability Systems
- Content Networking Routers & Routing Systems
 - Routing & Switching
- Voice & IP Communications
 - Security
 - Wireless
- Network Management
 - Metro Ethernet
 - Broadband Cable
- Application Oriented Networking
 - Storage Networking

Fortune 500 Clients:

Some of our National clients, Goldman Sachs, Wachovia Corp., Lehman Brothers, Prudential Financial, American Express, New York Life Insurance, Barnes & Noble.com Volaris Advisors, Marsh & McLennan Co., Bloomberg L.P, CEMEX, AIG Inc, Legg Mason, Inc., NASDAQ, NYSC, D.T.C.C, Paine Webber, Dimension data.

**Some of our International Clients, Deutsche Bank (Frankfurt, Germany), Dresdner Bank (Germany)
Commerzbank (Germany), Ainsworth Canada LP. (Toronto, Canada)**

Manage and Maintain

Manage your network to ensure continued peak performance and customer satisfaction. Having trouble identifying root causes of performance trouble? Need staffing to support help desk issues? Worried about security risks to your network? Are employees trained to work with emerging applications?

G I A helps simplify the management of your network. Our trained experts can provide helpdesk support and quickly troubleshoot network performance issues, enabling your employees to become more efficient and effective on the job. By allowing our professionals to manage your technology needs, We increases productivity and enables you to concentrate on core business needs. Call us Toll Free at **1-800-704-4193** Option 3 Sales

[Email-Hotline](#)

We have been in the Technology business since February 1993. Our [team](#) is experienced in providing high quality network support solutions for Fortune 500 companies, small business and individual home networks. We are experts in Cisco, Nortel, and 3 Com network gear. Our remote NOC ALERT management ensures your network will always be optimized to minimize any downtime. We are also fully experienced in the deployment, setup and troubleshooting of all security devices including **Cisco PIX**, SonicWALL, and Nokia Checkpoint Firewalls. Home users who need access to the corporate network can remotely connect using **Cisco VPN & PIX VPN** devices.

We are thoroughly experienced in implementing, configuring and troubleshooting **Cisco, Nortel VoIP** solutions

We possess extensive experience in troubleshooting and solving all manner of difficult and challenging router and network related problems.

We routinely handle complex DS0, DS1/T1, DS3/T3, OC-3 using PPP, HDLC, SMDS, 10/100 LAN, Load Balancing, F5, ACL management configurations, VoIP, and also provide expert service on Cisco 1600, 1700, 2500, 2600, 3600, 3700, 4000, 7100, 7200, 7400, 7500 series routers, Cisco 1900, 2900, 2950, 3500, 4000, 6000 series switches, and Cisco PIX series, ASA firewalls

[Data Center Network Architecture](#)

- Security Architecture
- Operation and management of application systems (configuration management, change management, firewall management, performance validation)
- Security health checks
- Threat and vulnerability assessments
- Security program management

- Training for employees
- Customizable reporting for application (call reporting, web access reporting, participant data)

Cisco Network Administration

Remote Router administration & mgmt.
Site Evaluation & Design.
System Troubleshooting & Debugging Sniffer Decode
Network Management (LAN/WAN) HPOV
Disaster recovery
Security Auditing & Hardening
Software Installation & Config
OS Updates management
Performance tuning
Emergency support (24/7)

Security & Firewall

Cisco VPN, PIX VPN setup and configurations.
Security Auditing & Updating,
Cisco ACL & Firewall rulesets
Router Firewall design/configure Cisco Pix 535 Clusters
Network security auditing & Hardening Nokia Checkpoint
Security alert and upgrade management
Disaster & Compromise recovery
Data & Colocation center auditing

Application Support & Management

WAN Cisco - F5 Load Balancing & Redundancy
LAN Routing optimization
NAT/Masquerading configure
Load Balancing/Switch optimization
DHCP & TCP/IP Management
Interface with Backone providers

Local and Wide Area Network

T1/T3/SONET/ATM/WAN Procurement & install
LAN Design & Deployment
ISDN/Frame-Relay/Cable integration
Router/Firewall integration
Ethernet, Wireless (802.11b)
LAN/WAN Diagnostics & Debugging

Security and Business Continuity

Security and Business Continuity Information is one of the most valuable assets of any company. Security breaches or other unexpected interruptions can happen anytime to anyone - whether you are a large enterprise or a small business. To help protect your vital data and to help secure your enterprise networking environment, G I A delivers a suite of Security and Business Continuity Services to help

assess vulnerabilities, protect your infrastructure, detect attacks, respond to suspicious activities and events, and design enterprise networking environments for non-stop operations

G I A utilizes its depth of knowledge, experience, process, platforms and investments to assist you in securing your enterprise networking environment with:

- proactive 24x7 monitoring and management
- real-time reporting and visibility of security performance & violations
- skilled security and business continuity professionals, proven processes and leading-edge platforms to extend your security and business continuity resources
- financially effective services provided on a subscription basis encompassing all equipment and upgrades
- "best practices" strategies to keep your business up and running. [Design Considerations](#)

[Voice over IP \(VoIP\)](#)

G I A's VoIP Services help your business evolve to the next generation of converged communication services. Enhancing employee productivity, reducing operational expenses and gaining the efficiencies of a unified network help you attain the leading edge over your competition. G I A's VoIP services are delivered with the quality of service, reliability and security required for your mission critical business communications. IP-MPLS network, which is standards-based and designed to support open protocols such as Session Initiated Protocol (SIP) which provides the interoperability and scalability that your business needs for next-generation communication applications. CCIE Steven Giammarino, Giammarino Services INC

G I A offers a broad portfolio of VoIP solutions designed to help you achieve your business objectives at the pace your business requires...

- Corporate Networks: VoIP with G I A 's VPN services helps you maximize your networking investment by providing you with high quality voice communications that can seamlessly connect your entire enterprise
- Branch Offices: G I A's IP Telephony services give you the flexibility to deploy advanced features throughout the entire enterprise. Whether your employees are located at headquarters or a remote office, they can all benefit from the productivity enhancements of IP Telephony.
- Remote Workers: Whether you have full-time, part-time or occasional remote workers, G I A will be providing services that support their needs with cost effective, feature rich options that allow them to be "always at their desk".
- Call Centers: As your call centers evolve to be IP-enabled, G I A will evolve with you and provide critical VoIP services to help you gain new efficiencies and capabilities as you serve your customers.

G I A's professionals are advanced in data analysis and packet decoding. We can architect the deployment of locale or ([Network General](#))Global [Distributed Sniffer Systems](#) (DSS). Network Probes ([SmartBits](#)) and Packet Sniffers ([Niksun](#)) for system monitoring and troubleshooting
